EXPERIENCE

Founder & Full Stack Software Engineer | WiBo | www.wibo.chat Feb 2025 - Present

- Built a layered Node.js/Express API with Firebase Bearer auth, PostgreSQL/TypeORM persistence, and plan-based entitlements for timed text, canvas, and voice interview sessions.
- Implement a RAG pipeline (PDF/DOCX ingestion, chunking, OpenAI embeddings, pgvector retrieval) to augment interviewer prompts in chat and voice flows.
- Integrated OpenAI Responses API (SSE streaming + debrief) and OpenAI Realtime voice via a secure WebSocket relay with short-lived tickets and usage quotas.
- Developed a React/Vite frontend with Excalidraw whiteboard UI, session history, and Stripe Checkout/portal for freemium subscriptions.
- Added backend test coverage and CI (Jest, GitHub Actions) across auth, chat, billing, voice, and RAG services.

Backend Software Engineer intern | *AidConnect* Jan 2024 - Feb 2025

- Built calendar and scheduling features to manage tasks, shifts, and activities, streamlining team coordination workflows.
- Developed authentication and onboarding workflows (sign-up, login, password reset, Google OAuth), improving user onboarding and access reliability.
- Owned development of the feedback and communication modules, enabling users to submit suggestions and concerns directly within the platform.
- Introduced sprint planning and stand-ups, improving delivery predictability and team coordination.
- Built an automated notification system using EJS templating, enabling real-time user updates for key actions and events

SELECTED PROJECT

Six Degrees of Separation Game | www.sixhopstotarget.com | Full-Stack Developer

- Built and launched a full-stack web application using React and TypeScript, serving 15,000+ users with recurring usage.
- Designed and implemented a Node.js + Express backend with PostgreSQL (Neon) to handle game logic, user submissions, and leaderboards.
- Built a TTL-based in-memory caching layer and request rate-limiter around the TMDB API, eliminating ~75% of redundant third-party calls and cutting cached actor/movie/cast lookups from ~250 ms to under 5 ms.
- Used Google Analytics and usability testing to identify low engagement in the Daily Challenge experience, then introduced competitive leaderboards; returning-user rate doubled following the changes.
- Deployed via Vercel with CI/CD, enabling rapid iteration on new features.

SKILLS

Programming Languages: Python, TypeScript, JavaScript, HTML, CSS, SQL
AI: OpenAI Responses API, OpenAI Realtime API, Retrieval-Augmented Generation (RAG), Embeddings, pgvector
Backend: Node.js, Express, REST APIs, WebSockets, Server-Sent Events (SSE), Firebase Authentication
Frontend: React, Vite, responsive web design, component design, navigation patterns
Cloud, DevOps & Databases: Docker, GitHub Actions, CI/CD, Vercel, PostgreSQL, MySQL, TypeORM
Tools: Git, Cursor, Postman, Figma, WSL Ubuntu

CERTIFICATIONS

Artificial Intelligence - Graduate Certificate - University of Colorado, Boulder – May 2026
AWS Certified Cloud Practitioner – Jan 2026
PythonInstitute.org: PCEP (entry level) and PCAP (Associate level) – Jan and Feb 2023
Scrum.org: Professional Scrum Master 1 – Sept 2026

EDUCATION

University of Colorado, Boulder - Master of Science in Computer Science, 3.9 GPA - Expected Graduation: Jan 2027
FAE Centro Universitario, Curitiba, Brazil - BA in Psychology, 3.6 GPA
Midwestern Career College, Chicago - Associate of Applied Science in Business Administration, 4.0 GPA
